VendorFlow - Master Product Requirements Document

1. Vision

To become the default vendor identity infrastructure for marketplaces in India, enabling seamless onboarding, verification, and interoperability across platforms.

2. Problem Statement

1. Repeated KYC across platforms
2. Slow onboarding cycles
3. Vendor drop-offs due to friction
4. Operational overhead for marketplaces

3. Solution Overview

VendorFlow provides a unified vendor identity layer where vendors upload documents once and reuse verified profiles across platforms via secure links and APIs.

4. Target Market

1. Hyperlocal delivery startups
2. Emerging marketplaces
3. ONDC ecosystem participants
4. SMB vendors in Tier 2/3 cities

5. Product Features

Vendor App

1. OTP login
2. Guided onboarding
3. Document upload with previews
4. Real-time status tracking
5. Reusable profile link

Platform Dashboard

1. Vendor listing & filters
2. Document viewer
3. Approval workflows
4. Analytics dashboard

Core Platform

1. Verification engine
2. API gateway
3. Webhook system
4. Role-based access

6. System Architecture

1. Frontend: Next.js
2. Backend: Node.js (modular services)
3. Database: PostgreSQL (Prisma)
4. Storage: AWS S3
5. Queue: BullMQ/Redis
6. Deployment: Docker + AWS

7. Database Design (Detailed)

1. Users, Vendors, Documents, Verifications, APIKeys, AuditLogs tables
2. Relationships: User→Vendor (1:1), Vendor→Documents (1:N)
3. Indexes on phone, vendor_id, status
4. Soft deletes for compliance

8. API Contracts

1. Auth APIs (OTP)
2. Vendor CRUD APIs
3. Document upload APIs
4. Verification APIs
5. Public profile APIs
6. Partner integration APIs

9. Security & Compliance

1. End-to-end encryption
2. JWT authentication
3. Signed S3 URLs
4. Audit trails
5. Compliance with Indian data regulations

10. UX Principles

1. Mobile-first
2. Low literacy friendly
3. Hinglish support
4. Minimal steps onboarding

11. Success Metrics

1. Onboarding time reduction
2. Conversion rate
3. Retention of platforms
4. API usage growth

12. Roadmap

1. MVP (manual verification)
2. Automation layer
3. ONDC integration
4. Financial services layer

13. Go-To-Market Strategy

1. Pilot with 1–2 startups
2. Case study driven sales
3. Founder-led sales initially
4. Expand via partnerships

14. Revenue Model

1. SaaS subscription
2. API usage fees
3. Verification charges
4. White-label licensing
